

EARLY CHILDHOOD EDUCATION

90% of human brain growth happens from birth to age six, but 98% of our state's educational investments happen after kids reach age five.

Increasing our state investments in the crucial ages from birth to age five supports improved educational outcomes throughout a child's life. High quality early childhood education has positive impacts on kindergarten readiness,1 third grade reading levels,² performance on tests throughout elementary school and to the end of high school, high school graduation, and enrollment and persistence in postsecondary education.⁵ The benefits also encompass a wide array of positive societal outcomes, including less engagement with the criminal justice system, and increased earnings and family stability as an adult.⁶ Home visiting – an early childhood education strategy in which a nurse or other professional coordinates services to families in their home – decreases the likelihood of abuse or neglect⁷ while improving family economic self-sufficiency.8

Every dollar Washington invests – and has invested in the past – returns significant value to our state. Early childhood education programs in Washington state – like the Early Childhood Education and Assistance Program (ECEAP) have a \$4.33 return on investment for every \$1 spent. Evidence-based home visiting can return benefits from \$1.80 to \$5.70 per dollar spent. Our previous state-level spending has ensured that we have two key infrastructure components already in place - a quality rating and coaching structure to ensure kids are in high-quality early care, and a research-proven, state-funded program for the highest need kids to get the supports they need to start school fully kindergarten-ready. Now is the time to see these previous investments through to their full potential, and to do the work to ensure we maximize our K-12 investments.

LOOKING AHEAD

Early childhood education programming is a vital investment for our children and the future of our state, and the COVID-19 pandemic has further destabilized equity in our early learning systems. League of Education Voters believes our state must provide immediate support to young learners and the early learning system by:

 Preserving and expanding access to highquality, affordable, culturally and linguistically relevant early learning that meets family needs and supports a well-compensated, highly trained workforce.
